About

Results-driven **SDET** with **3+ years** of experience building production-ready automation frameworks across **UI**, **API**, and **AI** systems. Skilled in Playwright, Selenium, and Pytest, with a growing focus on **LLM evaluation**, red-team testing, and AI quality assurance. Passionate about clean code, best practices, and mentoring.

Work Experience

HackerEarth, SDET

11/2023 – present | Bengaluru

LLM:

- Built an **end-to-end LLM evaluation framework** for an AI Interviewer in **Python** using **DeepEval**, simulating multi-turn interviews with custom **LLM-as-judge metrics** covering guardrail compliance, conversation flow, and several other **custom Metrics** specific to the interview, along with an Interactive test results dashboard.
- Engineered **red-team** security testing with **Promptfoo** to detect prompt injection, answer extraction, and social engineering attacks against the AI interviewer.

Playwright:

- Spearheaded the migration of the entire test automation codebase to **Playwright** and **TypeScript** using Playwright **MCP server** and **AI**, completing the transition within **one quarter**.
- Architected and implemented a robust automation **framework** from scratch, establishing scalable coding standards and best practices for the new repository.
- Authored all **API service** integrations and implemented a substantial suite of Playwright test cases to ensure comprehensive **coverage**.
- Created and configured **CircleCI** pipelines to support efficient and reliable **CI/CD** for the new codebase.
- Developed custom **cursor rules** for the repository, streamlining and accelerating the creation of new test cases.
- Onboarded and **mentored** team members to the new repository, providing hands-on guidance, code reviews, and technical demos to junior engineers.

Selenium + Pytest:

- Developed, maintained, and automated **API** and **UI** test scripts using **Pytest** and **Selenium**, ensuring adherence to best coding practices and increased coverage by **15%**.
- Led the deployment of multiple releases, streamlining the process by **20%** with **Pytest** test collection caching in **CircleCI**. Resolved automation failures in real-time using debugging skills, **Datadog**, and **Sentry**.
- Reduced functional tests execution time from **45 to 10 minutes** by implementing multithreading and parallel execution in **AWS Lambda**, resulting in significant CircleCI credit savings for each run.
- **Mentored** two new hires, onboarding them to the existing infrastructure and stack while ensuring adherence to best coding practices and providing guidance. Conducted PR reviews and accelerated their ramp-up time by **30%**.
- Contributed to the test framework, including key decisions to enhance test script efficiency and maintainability. Took the responsibility of maintaining **AWS Lambda** and **Docker**, which is used in infinite scaling of test automation.
- Created and maintained various utilities to minimize manual effort in everyday activities by about **20** minutes.

Tokopedia, SDET - Engineering Productivity

07/2022 – 04/2023

- Automate **100+ UI Testcases** using Katalon in **Groovy** and **backend testing** using TREX (internal tool)
- Scripting and executing **load tests** using **Go** and participating in BLT(big load test) events frequently.
- Maintain daily **UI automation** run and increased the success rate from **80% to 90%** by fixing test cases.
- Developing Test cases for new features and **Manual testing** of several features and API endpoints using **Postman**.
- Actively participating and **collaborating** with teammates during the weekly bug bash (bug finding event).

Skills

Languages

Python, C++, HTML5, CSS3,
SASS, JSX, JavaScript, TypeScript

Libraries and Frameworks

Playwright, Selenium, ReactJS,
NodeJS, Django, ExpressJS,

Other

Kubernetes, Linux, Docker,
Jenkins, Git, MySQL, MongoDB
